

About Jason Derkevics

It all started after college, when I began working for an international Health and Wellness company as the Product & Business Development Manager. My second year working there, we were approached by a man named Dr. Eric Llewellyn. He was offering a line to our company of whole food organic nutrient supplements. This was right up my alley I thought, as I was taking two "1-a Day" supplements daily. However, I couldn't justify the prices he was asking, as they were double that of any vitamin line I came across, Centrum, etc. Until.....I met with him and heard what he had to say.

I think it would be fair to say it was a moment of divine intervention when I realize where it has brought me today. As with many things today, pharmaceuticals are the greatest contributors to conspiracy. Is it possible that the vitamins and minerals they are telling us to take are actually meant to destroy our health? Very Possible. When you look at the facts, the United States takes more supplements than anywhere else on earth, and we have one of the highest rates of disease.

Women in the US take more Calcium Supplements than any other country, yet we have the highest rate of Osteoporosis. The reason is simple, the supplements we are taking are nothing but synthetic chemicals, and our bodies do not know how to handle them.

This is my passion, and for those of you that know me, please don't take this lightly, it's killing you, your family, friends, your pets and it needs to be stopped. This is why my life is dedicated to promoting my vitamin line, which has been proven in court of law that it is superior to USP, which is found in 99.9% of all the vitamins around the world. All the USP chemical vitamins and minerals are the same whether it's in centrum, 1- a - day, or Joe Schmoes vitamins.
