

## **Jerry W. Petermann Biography**

Jerry W. Petermann has spent a lifetime as a scientist, inventor, entrepreneur and creator of new business ventures. He has worked at all levels of science and technology and has been instrumental, at a national level, in leading the fight against the poisoning of children by lead based paint.

Within the past 12 years he was awarded a number of patents in telecommunications and artificial intelligence in the U.S. and abroad. He is active in the field of Mitochondrial DNA research and has fielded products to reduce the effects of aging and the rigors of competitive athletic competition. He has spent time as a Christian minister.

### **The Writer:**

However, since the age of ten he has also been a creative writer. First, published in local newspapers as a poet and later as a writer for radio and television. His greatest love in the field is children's books and short stories. There are though, longer stories for grownups and poetry...always there is poetry.

### **The Humorist:**

But, as he has aged, humor has become an area of developing interest as is the cartooning required for his four developing strips and collections of cartoon panels soon to be published as a book. This site showcases a few of his works and will eventually become the center of his publishing efforts with various media for sale: audio CD's, framed Cartoon Panels, stories, children's books, books of collected-stories, a novel and poetry.
