

About Sharry Edwards

Named Scientist of the Year in 2001 for her work in BioAcoustic Biology

Sharry Edwards™ is the pioneer in the study of Human BioAcoustic Biology. Her 30 years of research is being used at the Institute of BioAcoustic Biology in Albany, OH.

Currently, Edwards and her team at Sound Health are using human voice and the associated frequencies to help clients resolve health issues such as: macular degeneration, multiple sclerosis, headaches, muscle stress, brain trauma, weight issues and nutritional concerns.

The technology she brings to the stage is cutting edge! This technology can identify health and well-being possibilities that you have never encountered.

Sharry Edwards' work is now included in The Duke University Encyclopedia of New Medicine, by Leonard A. Wisnecki and The Scientific Basis of Integrative Medicine, by Lucy Anderson.

The effects of BioAcoustic Biology, now accepted by these prestigious medical encyclopedias, have unlimited health and wellness potential.

According to Edwards, "BioAcoustics Voice Spectral Analysis can detect hidden or underlying stresses in the body that are expressed as disease." The vocal print can identify toxins, pathogens and nutritional supplements that are too low or too high. In addition, vocal print can be used to match the most compatible treatment remedy to each client. The introduction of the proper low frequency sound to the body, indicated through voice analysis, has been shown to control: pain, body temperature, heart rhythm, and blood pressure. It has also been shown to regenerate body tissue, and alleviate the symptoms of many diseases (in some cases, even those considered to be incurable).
