

About Wayne Blakeley, developer of Living Streams Probiotics

Living Streams Probiotic™ is a natural by-product of friendly bio-organisms (probiotics) that have been specially cultured and developed to produce the natural anti-infective substances the human body was meant to receive from flora in the intestinal tract.

Processed foods (for both humans and animals), lack enzymes and other nutrients which results in poor quality intestinal flora and other health stresses. Even the normal amounts of these substances that would otherwise be there are missing in most animals and people. On top of that, because the friendly bacteria are missing from the intestinal tract growth of "bad" bacteria, fungus, yeast, virus and mold colonies can seriously harm health. Even if you think you are healthy, subclinical infective processes may be at work, slowly damaging your health.

Living Streams Probiotics manufacture a line of liquid probiotics that are unique in that they are used in their complete form. Nothing is added or taken away. They contain nutrients in a form that are easily useable by the human body. They are also compatible with absorption through the skin and mucus membranes which opens up many non-traditional pathways into the body. Pathways into the body may be clogged or closed in some people. Our probiotics can be taken orally through the mouth or can be applied to the skin including the eyes, ears, nose, lungs, etc.
